TECHNOLOGICAL FORECASTING AND SOCIAL CHANGE 44, 431(1993)

Author Index—Volume 44

Alic, J.A., 359

Berry, B.J.L., 111
Bhargava, S.C., 87
Boggess, W.G., 17

Campos Lopez, E., 291
Coates, J.F., 219, 325, 419

Dror, I., 49

Ehrnberg, E., 27

Farrell, C.J., 161
Filippini, L., 283

Georgoff, D.M., 1
Golden, J.E., 265
Gupta, A.D., 199

Halal, W.E., 69
Harrison, E.F., 245
Hasnath, S.A., 333
Herbig, P., 265
Hoos, I.R., 99

Jacobs, M., 315
Jacobsson, S., 27

Kalaitzadonakes, N.G., 17
Kastein, M.R., 315
Kim, H., 111
Kim, H.-M., 111
Kostoff, R.N., 231
Kumar, A., 87

Liu, W.G., 179
Luttik, K., 315

Martino, J.P., 147
Matarazzo, G., 187
Mourelatos, A.G., 391
Mukherjee, A., 87
Murdick, R.G., 1

Nikov, A., 187

Orlando, A., 187

Papayannakis, L.L., 391
Pelletier, M.A., 245

Rogers, S.L., 59

Sharma, H.D., 199
Skiadas, C.H., 391
Suarez-Villa, L., 333
Sushil, 199

Touw-Otten, F.W.M.M., 315
Truman, K., 291

Van der Hell, R.H., 315

Weiner, D., 137

Young, P., 375

Zhang, W.-B., 405

Book Index—Volume 44

Cooke R.M., *Experts in Uncertainty* (Theodore Modis), 229

Mayo, D.G. and Hollander, R.D., *Acceptable Evidence* (Joseph P. Martino), 331

Moll, P., *From Scarcity to Sustainability—Futures Studies and the Environment: the Role of the Club of Rome* (Christopher B. Jones), 107

National Research Council, *The Competitive Edge: Research Priorities for U.S. Manufacturing* (Kish Sharma), 425

Thompson, W.B., ed., *Controlling Technology: Contemporary Issues* (Joseph F. Coates), 429

TECHNOLOGICAL FORECASTING AND SOCIAL CHANGE 43, 432–436 (1993)

Subject Index—Volume 44

Abdominal complaints, family physician performance and, 315
Absorbing capability, quantitative technology transfer model and, 179
Academic community, technological change and, 59
Accomplishments books, research impact assessment and, 231
Adopter, stochastic cellular automata model of diffusion and, 88
Age cycle, innovative capacity and, 333
Aggregate innovative capacity, educational infrastructure construction and, 333
Aggregate levels, categorization of system waste at, 199
Aircraft turbine engines, technology transfer model and, 179
Air Force Office of Scientific Research, research impact assessment and, 231
Alonso model, two-group island economy and, 405
Arrow's learning-by-doing model, two-group island economy and, 405
Artifacts, theory of development of, 161
Ascending technologies, wide-range innovations and, 49
Attacker, performance advantage of, 161
Automatically generated programming, information technology revolution and, 69

Bass model, of innovation diffusion, 88
Bifurcations, in labor market, 59
Biological paradigm
  electrical power industry in twenty-first century and, 137
  technological progress and, 161
Birth of an industry, 161
Bureau of Labor Statistics, high technology industries and, 60
Business forecasting, techniques commonly used in, 2

Capacity expansion, substitution between technologies and, 283
Capital, in two-group island economy, 405
Capitalism, burying, 419
Cargo aircraft productivity, comparison of two composite measures of technology and, 147
CAX technologies, 359
Cellular automata, innovation diffusion and, 87
Census Bureau, issues faced by, 325
Central America, community sustainability in, 291
Centralized bureaucracies, community sustainability and, 291
Chance preferences, stochastic cellular automata model of diffusion and, 87
Chief executive officer, strategic decisions and, 245
Classic retrospective approach, in research impact assessment, 231
Classification system, forecasting and, 1
Communism, death of, 419
Community, sustainability of, 291
Competition, artifact growth and, 161
Competitive firm, technology adoption problem of, 17
Competitive strategy, technological discontinuity and, 27
Composite measures of technology, comparison of, 147
Computer-assisted everything technologies, 359
Computers
  high technology industries and, 60
  human factors analysis and, 187
  information technology revolution and, 69
Consensus building, community sustainability and, 291
Corporate innovative capacity, educational infrastructure construction and, 333
Cost-benefit analysis, in research impact assessment, 231
Cost-effectiveness measures, gone berserk, 99
Coupled technology transfer, 180
Creativity, in two-group island economy, 405

Decision alternatives, forecasting and, 2
Decision-theoretic model, adoption problem and, 17
Decline, of techno-economic systems, 111
Defender, substitution and, 161
Defense Advanced Research Projects Agency, research impact assessment and, 231
Delphi studies
  of primary health care, 315
  of system waste, 199
Demand side, of diffusion process, 283

Department of Energy High Energy Physics Program, research impact assessment and, 231
Department of Energy Office of Health and Environmental Research, research impact assessment and, 231
Department of Labor, high technology industries defined by, 60
Design, computer-assisted technologies in, 359
Detroit, as innovative hot spot, 265
Dialogue, community sustainability and, 291
Diffusion
  of innovation, 283
  long waves and, 111
  stochastic cellular automata model of, 87

Economic entitlements, innovative hot spots and, 265
Economic geography, in two-group island economy, 405
Economy, bifurcations in, 59
Educational infrastructure construction, innovative capacity and, 333
Educational policy making, technological change and, 59
Electrical power industry, power 2000 and, 137
Electric energy system, in Greece, 391
Electronic amplifiers, comparison of two composite measures of technology and, 147
Electronic education, information technology revolution and, 69
Electronic shopping, information technology revolution and, 69
Emergence, of new technology, 49
Energy systems, power 2000 and, 137
Equilibrium niche, diffusion of innovation and, 283
Eudaemonia, 99
Europe, machine tool industry in, 27
Evaluative bibliometrics, in research impact assessment, 231
Evidence, acceptable, 331
Evolution, of technology, 161
Expenditure, effect of infrastructure on investment and, 333
Expert systems, information technology revolution and, 69
External technology transfer, 179
Extinction, 161

Family physicians, performance of, 315
Federal government, research impact assessment by, 231
Field surveys, stochastic cellular automata model of diffusion and, 87
Fighter aircraft performance, comparison of two composite measures of technology and, 147
Fisher-Pry model, for technological advances, 87
Flexibility, human factors analysis and, 187
Flexible manufacturing systems, European machine tool industry and, 27
Followers, quantitative technology transfer model and, 179
Forecasting nomenclature limitations, 1
Fuzzy knowledge-based evaluation mechanism, human factors analysis and, 187

Generic names, forecasting and, 1
Germany, machine tool industry in, 28
Global social order, information technology revolution and, 69
Government, R & D spending of, 59
Greece, electric system in, 391
Gross domestic product, Greek electric system and, 391
Growth, in two-group island economy, 405
Growth curve models, 375
Growth functions, improving forecasting ability of, 391

Hardware, information technology revolution and, 69
Higher educational institutions, structural changes at, 59
High technology
  educational policy making and, 59
  growth of, 50
Hot spots, innovative, 265
Human factors analysis, in office automation systems, 187

Increasing returns, substitution between technologies and, 283
India, national-level Delphi of system waste in, 199
Individual client situation, human factors analysis and, 187
Individual preferences, stochastic cellular automata model of diffusion and, 87
Industry-university partnerships, technological change and, 59

Inflation peaks, techno-economic transformations and, 111
Information technology revolution, 69
Infrastructure, effect of on invention, 333
Innovation
  diffusion of, 87, 283
  technology evolution and, 49
  wheel of, 265
Innovative capacity, 333
Internal influence term, technological forecasting and, 88
Internal technology transfer, 179
International economy, new, 359
Intraclass correlation coefficient, in assessment of Delphi study reliability, 315
Invention, infrastructural investment and, 333
Investments, Greek electric system and, 391
Island economy, two-group, 405
Italy, machine tool industry in, 28

Japan, machine tool industry in, 27

Kaldor-Pasinetti model, two-group island economy and, 405
Kappa coefficients, in assessment of Delphi study reliability, 315
Knowledge utilization, in two-group island economy, 405
Kondratiev waves, 54-year, 111

Large-scale systems, growth functions in forecasting parameters of, 391
Leaders, quantitative technology transfer model and, 179
Life cycle, of a technology, 49
Light waves, optical computers and, 70
Location choice, in two-group island economy, 405
Logistic diffusion process, substitution path dynamics and, 283
Logistic function, Greek electric system and, 391
Logistic growth, stochastic cellular automata model of diffusion and, 87
Long-run growth, in two-group island economy, 405
Long-wave rhythms, driving forces behind, 111
Lumpiness, in goods to be shipped, 148

Manufacturing
  computer-assisted technologies in, 359
  research priorities for, 425
Market demand, substitution between technologies and, 283
Market potential, stochastic cellular automata model of diffusion and, 87
Mature technologies, narrow-range innovations and, 49
Maya zone, community sustainability in, 291
Mechatronics, electrical power industry and, 137
Mexico, community sustainability in, 291
Modified logistic function, Greek electric system and, 391
Morphology, of forecasting, 1
Multiple parameters, technology characterized by, 147
Multitechnology innovations, as driving force in technology evolution, 49

Netherlands, qualitiative Delphi study of primary health care in, 315
New product diffusion, stochastic cellular automata model of, 87
Nonlinear differential equation model, technology transfer processes and, 179
Numerically controlled machine tools, flexible manufacturing systems and, 28

Occupational structure, bifurcations in, 59
Office automation systems, methodology for human factors analysis in, 187
Office of Naval Research, research impact assessment and, 231
Optical computers, information technology revolution and, 69
Optimal control problem, adoption problem as, 17
Ordinary differential equation models, of innovation diffusion, 88
Output, substitution between technologies and, 283

Parallel processors, information technology revolution and, 69
Partial adoption, competitive firm and, 17
Participatory planning process, community sustainability and, 291
Patents, effect of infrastructure on investment and, 333
Peak deployment, long waves and, 111

Pearson coefficients, in assessment of Delphi study reliability, 315
People's Republic of China, aircraft turbine engines in, 179
Performance advantage, substitution and, 161
Personal assistants, information technology revolution and, 69
Phase-dominant model, internal transfer of technologies and, 179
Physical environment, community sustainability and, 291
Pittsburgh, as innovative hot spot, 265
Planar tradeoff surface technique, comparison of two composite measures of technology and, 148
Policy, higher education and, 59
Political processes, community sustainability and, 291
Portable computers, information technology revolution and, 69
Postindustrial society, information technology revolution and, 69
Power 2000, 137
Prices
  long waves of, 111
  substitution between technologies and, 283
Primary health care, qualitative Delphi study of, 315
Product, chance preferences for, 87
Product design/development, computer-assisted technologies in, 359
Programs, information technology revolution and, 69
Project Hindsight, research impact assessment and, 231
Project TRACES and follow-ons, research impact assessment and, 231
Public administration, office automation systems in, 187
Public information networks, information technology revolution and, 69

Quantitative approaches, in research impact assessment, 231
Quantitative technology transfer model, aircraft engines and, 179
Quasi fixed factor, technology adoption problem and, 17

R & D, higher education and, 59
Rags-to-riches-to-rags evolution, of innovation hot spots, 265
Rank-order coefficients, in assessment of Delphi study reliability, 315
Relative electric price, Greek electric system and, 391
Reliability, of Delphi technique, 315
Renewable energies, power economies and, 137
Research impact assessment, semiquantitative methods for, 231
Residential pattern and structure, in two-group island economy, 405
Retrospective approaches, in research impact assessment, 231
Rural communities, sustainability of, 291

San Jose, as innovative hot spot, 265
Saturation level, of Greek electricity demand, 391
Savings behavior, in two-group island economy, 405
Scarcity, sustainability and, 107
Scoring model, comparison of two composite measures of technology and, 148
Seed region, takeover time in, 87
Semiquantitative methods, for research impact assessment, 231
Services, information technology revolution and, 69
Significance, in strategic choice, 245
Silicon chips, information technology revolution and, 69
Single measure of performance, composite measures of technology and, 147
Skill requirements, academic community and, 59
Smart appliances, information technology revolution and, 70
Software, information technology revolution and, 69
Solow-Swan model, two-group island economy and, 405
Spending patterns, for R & D, 59
Stage-dominant model, internal transfer of technologies and, 179
Stochastic cellular automata model, of innovation diffusion, 87
Stochastic events, artifact technologies and, 161
Stoneman's model, technology adoption and, 17
Strategic choice, typology of, 245
Strategy, technology evolution and, 49
Structural forecast combinations, 1
Struggle for existence, 161
Substitution, artifact technologies and, 161

Superchips, information technology revolution and, 69
Supply side, of diffusion process, 283
Survival of the fittest, 161
Sustainability, of community, 291
Systems approach, to forecasting, 1
System waste, national-level Delphi study of, 199

Takeover time, stochastic cellular automata model of diffusion and, 87
Task-dominant model, internal transfer of technologies and, 179
Techno-economic transformations, long waves and, 111
Technological discontinuity, competitive strategy and, 27
Technological growth curves, appropriate model selection of, 375
Technological progress, theory of, 161
Technology
  controlling, 429
  evolution of, 49
  two composite measures of, 147
Technology adoption problem, decision-theoretic model of, 17
Technology transfer processes, aircraft turbine engines and, 179
Telecommuting, information technology revolution and, 69
Teleconferencing, information technology revolution and, 69
Time-series statistical analyses
  infrastructure effect on investment and, 333
  technological growth curves and, 375
Total forecast system, technique selection and, 1
Transistors, information technology revolution and, 69
Transportation conditions, in two-group island economy, 405
Twenty-first century
  census in, 325
  electrical power industry in, 137
Two-dimensional typology, of strategic choice, 245
Two-group island economy, model of, 405

Ubiquitous computing, interactive environment of, 70
Uncertainty, experts in, 229
United Kingdom, long waves and, 111
United States
  aircraft turbine engines and, 179
  CAX technologies and, 359
  higher education and, 59
  high technology and, 59
  innovation potential and, 333
  innovative hot spots and, 265
  long waves and, 111
  machine tool industry and, 27
  manufacturing and, 425
  patent data base and, 49
  research impact assessment and, 231
Urban model, two-group, 405

Vacuum tubes
  extinction and, 161
  information technology revolution and, 69
Verhulst equation, stochastic cellular automata model of diffusion and, 87
Very large scale integrated circuits, information technology revolution and, 69

Washington, DC, future of, 219
Waste management practices, national-level Delphi study of, 199
Wealth distribution, in two-group island economy, 405
Wheel of innovation, 265
